

Compier

Digitalize PV Operations and Establish Compliance Oversight

The Future of PV Ops Management

Establishing the capability to take informed decisions with well-orchestrated pharmacovigilance processes and unified communication will be a market differentiator for sponsors and affiliates. To stay compliant with evolving safety and pharmacovigilance global regulations sponsors are increasingly working towards developing risk-based operational intelligence with integrated and insightful digital PV process management while working with multiple vendors, business partners, affiliates and service providers.

Compier is a purpose-built process orchestration and compliance governance solution to streamline, track and report the outcomes of PV operations and cross-functional activities managed by different vendors, partners and affiliates.

Key Platform Modules

- | | |
|--|--|
|  Agreements & Reconciliation |  Literature Screening |
|  Aggregate Reporting |  Electronic PSMF |
|  Mailbox & Intake |  Compliance Sheets |
|  ICSR Operations & QR |  PV Ops Oversight |

- Eliminate process complexity and scale up productivity of your cross-functional teams by streamlining all your core PV operational processes with digital workflows and decision controls using Compier.
- Engineered with modern automation technology, Compier enables companies to significantly reduce process time, increase quality and take informed decisions that eliminates risk and increases regulatory compliance.
