

PV360 Services

Leverage our Technology Driven Drug Safety, Pharmacovigilance and Medical Information Services

How We Help Clients

With Patient safety as the highest priority for pharmaceutical and biotechnology companies, the pharmacovigilance (PV) team has the crucial responsibility to identify, collect, and process the Individual Case Safety Reports (ICSRs) with confidentiality and report to regulatory authorities within the stipulated timelines. Techsol has more than a decade experience in case processing and regulatory reporting services. With our combination of powerful technology and functional capabilities, we deliver high-quality functional services using our readily available validated AccelSafety database.

Similarly, we leverage our proprietary Compier Pharmacovigilance Operations Management platform to deliver transparent PV Services. Sponsors can gain real-time insights for monitoring and managing the safety profile of any medicine with effective risk management and informed decision making through our Compier platform. With our presence across the globe our global pharmacovigilance team is capable of handling large case volumes, complex multi-center and multi-national safety operations with a combination of offshore and onshore teams. We offer independent PV Services or integrated with global medical information and regulatory services.
